

MOOC ▶ 12 OCT 26

## CYBERBULLYING

in a rapidly changing digital world

Children and young people today grow up in a **deeply connected digital environment**, where they find significant opportunities for creativity, participation and connection, but also get exposed to **evolving forms of risk, including cyberbullying**.

The MOOC “**Cyberbullying in a rapidly changing digital world**” aims to equip educators with the knowledge, skills and tools needed to **prevent, identify, report** and **respond** effectively to cyberbullying. It is grounded in a shared understanding of cyberbullying, and it supports participants in navigating complex and often ambiguous situations in formal and informal contexts with greater confidence. The MOOC adopts a comprehensive and integrated perspective that brings together **technological, social, psychological** and **educational dimensions of cyberbullying** in various online environments.

## What will you gain from this course?

By the end of the MOOC, you'll be able to:

- Develop a comprehensive understanding of cyberbullying.
- Explore how new technologies including AI are creating challenges for defining, identifying and addressing cyberbullying.
- Examine how to navigate online risks to develop boundaries, responsibility, resilience.
- Assess cyberbullying situations to appropriately identify and respond to incidents.
- Explore reporting pathways and support mechanisms.
- Enhance digital, AI and social-emotional competences for practical prevention strategies.

## Who is this course for?

This course is for anyone supporting young people:

- Primary & secondary teachers (all subjects)
- School leaders & support staff
- Youth workers, carers & informal educators
- Policymakers & professionals working on digital wellbeing and online safety
